PROFESSIONAL SUMMARY

- .NET Developer with 3+ years of experience building and maintaining web applications using ASP.NET Core, C#, Web API, and SQL Server.
- Designed and developed RESTful APIs with JWT-based authentication and authorization, and integrated third-party services.
- Built scalable applications using Clean Architecture, Layered Architecture, and modular development practices.
- Strong SQL Server development skills — stored procedures, query optimization, indexing, and schema design.
- Improved application performance through Redis caching and efficient database design.
- Handled deployment, environment configuration, and production support alongside feature development.
- Worked in Agile Scrum teams — sprint planning, code reviews, testing, and release activities.
- Took full ownership of two new projects after the first year — led a 4-member team and delivered both: HMS (Dec 2024) and HRMS (Nov 2025).

SKILLS

Backend: C#, .NET, ASP.NET Core, Web API, REST APIs, JWT Authentication & Authorization

Database: SQL Server, Stored Procedures, Query Optimization, Schema Design, Indexing

Caching & Performance: Redis Caching, Performance Tuning

Architecture: Clean Architecture, Layered Architecture, Modular Design

Deployment & Support: Deployment, Environment Configuration, Production Support

Practices: Agile Scrum, Sprint Planning, Code Reviews

Tools & AI: Git, GitHub, Visual Studio 2022, Visual Studio Code, GitHub Copilot, Claude, Codex

PROFESSIONAL EXPERIENCE

.NET Developer — [Revalsys Technologies Pvt. Ltd.](#), Hyderabad, India Feb 2023 – May 2026

Spent the first year working on feature development and support for existing company applications, then took full ownership of building two new projects, delivered one after the other.

Project 1 — Healthcare Management System (HMS) | Completed Dec 2024

About: A web-based healthcare platform covering patient appointments, doctor scheduling, digital prescriptions, pharmacy operations, and hospital administration — including Ayush Bharat, a patient-facing web portal.

Role: .NET Developer & Team Lead (led a 4-member team under the Project Manager)

- Developed patient registration, hospital search, doctor mapping, appointment booking, and digital prescription modules end to end — REST APIs, business logic, and web UI.
- Implemented doctor availability and appointment scheduling workflows.
- Built administration modules for managing hospitals, doctors, staff, and system master data.
- Secured APIs with JWT authentication and authorization across patient, doctor, and admin functions.
- Improved response times and reduced database load using Redis caching for frequently accessed data, along with stored-procedure and index optimization.
- Handled deployment and environment configuration; provided production support and resolved live issues.
- Led a 4-member team — assigned tasks, reviewed code, gave technical guidance, and made sure each sprint was delivered on schedule.

Stack: ASP.NET Core, C#, Web API, SQL Server, Redis, JWT

Project 2 — Requisition & Onboarding System (HRMS) | Completed Nov 2025

About: A Human Resource Management System where requisition and onboarding run as one end-to-end flow — from job requisition and candidate hiring through to onboarding and employee joining.

Role: .NET Developer & Team Lead (4-member team)

- Developed end-to-end recruitment workflows — JD creation, consultancy assignment, candidate submission, interview management, offer processing, and candidate onboarding.
- Implemented multi-stage interview processes with feedback tracking and approval workflows.
- Designed onboarding modules for document verification, medical checkups, and employee joining activities.
- Built REST APIs and business logic, with optimized SQL Server stored procedures and indexing for recruitment and onboarding operations.
- Managed the team through this project as well — task allocation, code reviews, and issue resolution, owning delivery through release.

Stack: ASP.NET Core, C#, Web API, SQL Server, JWT

RECOGNITION & ACHIEVEMENTS

- AI Hackathon Winner (2025) — Revalsys Technologies: One of 3 winners of the company-wide Revalsys AI Hackathon 2025; integrated GitHub Copilot, Claude, and Codex into daily development workflows with measurable productivity improvements. [Featured on the company website.](#)
- 15+ Production Modules Delivered across Healthcare (HMS), HRMS recruitment automation, and SaaS service platforms — consistent end-to-end ownership and cross-domain delivery.
- Reusable Dynamic APIs: Built 3 reusable stored-procedure-driven APIs (search, get-by-code, master data retrieval) that eliminated per-module API duplication and saved development time across the team.
